## Inter-Wiki Link Rules (or Links to other Sites)

This topic lists all aliases needed to map Inter-Site links to external wikis/sites.

Whenever you write **`ExternalSite:Page`** it will be linked automatically to the page on the external site. The link points to the URL corresponding to the **`ExternalSite`** alias below, concatenated to the **`Page`** you choose. Example: Type **`Wiki:RecentChanges`** to get Wiki:RecentChanges, the RecentChanges page at the original Wiki site.

### How to define Inter-Site links

- Inter-Site links are defined in the tables below.
- Each entry must be of format:
  **`| External site alias | URL | Tooltip help text |`**.
- The Alias must start with an upper case letter and may contain alphanumeric letters.
- The URL and Tooltip Text may contain optional **`$page`** formatting tokens; the token gets expanded to the page name.
- **Note:** The Tooltip Text must not contain any HTML tags (including **`<nop>`** escape code), no internal WikiWord links, and no external links. Hint: Escape **`'WikiWords'`** and **`'$page'`**.
