Help on Preferences

- A *preference setting* lets you define a simple macro? that can be expanded in your output.
- A preference setting looks like this:
3 or 6 spaces * Set NAME = value
Example:
 - ◆ Set WEBBGCOLOR = #FFFFC0
- A preferences setting can be disabled with a # sign. Remove the # sign to enable a local customisation. Example:
 - ◆ #Set DENYWEBCHANGE = UnknownUser
- Macros defined using preference settings are expanded by enclosing the name in percent signs.
Example:
 - ◆ When you write %WEBBGCOLOR%, it gets expanded to #FFD8AA
- The sequential order of the preference settings is significant. i.e. set WEBCOPYRIGHT before WIKIWEBMASTER since %WEBCOPYRIGHT% uses the %WIKIWEBMASTER% setting.
- You can introduce your own preference settings and use them in your topics and templates.
- Preferences can be defined in a number of places:
 1. DefaultPreferences
 2. SitePreferences
 3. Parent webs WebPreferences
 4. WebPreferences
 5. In user topics
 6. In Plugin documentation topics
 7. In topics
- Preference settings can be *finalised*, which means they can't be redefined
