_default Web Preferences

The following settings are **web preferences** of the `_default` web. These preferences overwrite the **site-level preferences** in `System.DefaultPreferences` and `Main.SitePreferences`, and can be overwritten by **user preferences** (your personal topic, eg: `WikiGuest` in the Main web).

Web Preferences Settings

These settings override the defaults for this web only. See full list of defaults with explanation. Many of the settings below are commented out. Remove the `#` sign to enable a local customisation.

- List of topics of the `_default` web:
 - ◆ `#Set WEBTOPICLIST = Changes | Index | Search | Go`

`#DDDDDD`

- Web-specific background color: (Pick a lighter one of the `StandardColors`).
 - ◆ `Set WEBBGCOLOR = #DDDDDD`
 - ◆ **Note:** This setting is automatically configured when you create a web
- Image, URL and alternate tooltip text of web's logo.
 - Note:** Don't add your own local logos to the `ProjectLogos` topic; create your own logos topic instead.
 - ◆ `#Set WEBLOGOIMG = /pub/Main/IacLogos/iaclogo.gif`
 - ◆ `#Set WEBLOGOURL = https://wiki.iac.ethz.ch/foswiki/bin/view/Main/WebHome`
 - ◆ `#Set WEBLOGOALT = IAC/ETH`
- List this web in the SiteMap. If you want the web listed, then set `SITEMAPLIST` to `on`, do not set `NOSEARCHALL`, and add the "what" and "use to..." description for the site map. Use links that include the name of the web, i.e. `_default.Topic` links.
 - Note:** Unlike other settings, `SITEMAPLIST` is **not** inherited from parent webs. It has to be set in **every** web that is to be listed in the SiteMap
 - ◆ `Set SITEMAPLIST = on`
 - ◆ `Set SITEMAPWHAT =`
 - ◆ `Set SITEMAPUSETO =`
 - ◆ **Note:** Above settings are automatically configured when you create a web
- Exclude web from a `web="all"` search: (Set to `on` for hidden webs. Comment out or set to the empty string if the web is to be included in search.)
 - ◆ `Set NOSEARCHALL =`
 - ◆ **Note:** This setting is automatically configured when you create a web
- Prevent automatic linking of WikiWords and acronyms (if set to `on`); link WikiWords (if empty); can be overwritten by web preferences:
 - ◆ `#Set NOAUTOLINK =`
 - ◆ **Note:** You can still use the `[[...]]` syntax to link topics if you disabled WikiWord linking. The `<noautolink> ... </noautolink>` syntax can be used to prevent links within a block of text.
- Default template for **new topics** for this web:
 - ◆ `WebTopicEditTemplate?:` Default template for new topics in this web. (Site-level is used if topic does not exist)
 - ◆ `System.WebTopicEditTemplate:` Site-level default topic template

- Comma separated list of **forms** that can be attached to topics in this web. See DataForms for more information.
 - ◆ Set WEBFORMS =
- Users or groups who **are not** / **are** allowed to **view** / **change** / **rename** topics in the _default web: (See AccessControl).
 - ◆ Set DENYWEBVIEW =
 - ◆ Set ALLOWWEBVIEW =
 - ◆ Set DENYWEBCHANGE =
 - ◆ Set ALLOWWEBCHANGE = AdminGroup
 - ◆ Set DENYWEBRENAME =
 - ◆ Set ALLOWWEBRENAME = AdminGroup
- Users or groups allowed to change or rename this WebPreferences topic: (e.g., AdminGroup)
 - ◆ Set ALLOWTOPICCHANGE = AdminGroup
 - ◆ Set ALLOWTOPICRENAME = AdminGroup
- Web preferences that are **not** allowed to be overridden by sub-web, user or topic preferences:
 - ◆ Set FINALPREFERENCES = NOSEARCHALL, ATTACHFILESIZELIMIT, WIKIWEBMASTER, WEBCOPYRIGHT, WEBTOPICLIST, DENYWEBVIEW, ALLOWWEBVIEW, DENYWEBCHANGE, ALLOWWEBCHANGE, DENYWEBRENAME, ALLOWWEBRENAME

Help on Preferences

- A *preference setting* lets you define a simple macro? that can be expanded in your output.
- A preference setting looks like this:

```
3 or 6 spaces * Set NAME = value
```

 Example:
 - ◆ Set WEBBGCOLOR = #FFFFC0
- A preferences setting can be disabled with a # sign. Remove the # sign to enable a local customisation. Example:
 - ◆ #Set DENYWEBCHANGE = UnknownUser
- Macros defined using preference settings are expanded by enclosing the name in percent signs. Example:
 - ◆ When you write %WEBBGCOLOR%, it gets expanded to #DDDDDD
- The sequential order of the preference settings is significant. i.e. set WEBCOPYRIGHT before WIKIWEBMASTER since %WEBCOPYRIGHT% uses the %WIKIWEBMASTER% setting.
- You can introduce your own preference settings and use them in your topics and templates.
- Preferences can be defined in a number of places:
 1. DefaultPreferences
 2. SitePreferences
 3. Parent webs WebPreferences
 4. WebPreferences
 5. In user topics
 6. In Plugin documentation topics
 7. In topics
- Preference settings can be *finalised*, which means they can't be redefined

Tools

-  **Rename, move or delete this web:**
 - ◆ **Rename/move/delete web...**, looking for references in *all public webs* - See also:
